CB-26P Fitting position

Skyline GTS

"Attached some pics of the CB-26P fitted to my Nissan Skyline R33 GTS-T (type M) for its full name! Any way its the single turbo 2.5ltr 6cyl engine, the RB25DET.

The fitting of an Ecotek valve to the Nissan Skyline R33 GTS-T is such a must for any other owners out there, all you need is a Stanley knife to cut the pipe, no tools are needed and it really will only take 10 mins to complete.

Better still it will have a positive effect on your wallet, get used to visiting your local

Shell garage for that must have Optimax Super Unleaded far less.

Have always waved the flag of support for Ecotek, using their products on previous cars, I had no apprehension in fitting the valve to my Skyline - as before..... a successful product."
