CB-26P Fitting position

Vauxhall Omega X20

Phil sent us this: "I fitted the said CP26P to my Omega X20XEV, With some doubt in mind, I use the car for towing and SDP normally, before a-round town I would expect to see on its on-board computer 19.8 mpg and towing 19.1mpg on a good run, (i.e. Ellesmere Port-Cornwall). I set up the unit as per instructions and set off towing to Matlock from Ellesmere Port (M53-M56-A6-Matlock) a variation of road at up to speeds of 65 mph.

When I arrived, I checked the distance travelled which was 71.1 miles, I checked the Fuel computer and the car with CP26P now fitted and tuned had returned 21.5mpg, I was impressed. The car drove very well no flat spots and nice and smooth.

The next day I drove 16 miles from Whatstandswell-Bakewell (A6) and reset the trip computer, On arriving at Bakewell I check the trip computer and noted the car had returned 35.6 mpg, never have I seen this in the 3 yrs I have owned the car.

On the return journey the car returned 36.5 mpg. The next day I drove from Whatstandswell -Ashbourne and the car returned 38.9 mpg and at one stage was recording 40.1 mpg until we hit road works.

The next day I returned home using the car Sat Nav system letting it decide its route home, In which was Whatstandswell to Ellesmere Port, all A-roads total 90 miles, I checked the trip computer and it had recorded 21.4 mpg towing, I am now very impressed.

Large thanks to Wizzy for input and Ecotek for saving me money and increasing the car performance..
